Kiran S R

Full Stack Engineer | React · Node.js · MERN · REST APIs · AI Integration

Bengaluru, India +91 81247 85632 skkiran1258@gmail.com LinkedIn ↗ GitHub ↗ Portfolio ↗

PROFESSIONAL SUMMARY

Full Stack Engineer with 10+ months of internship experience building and shipping production-grade MERN stack applications. Proven record of delivering measurable performance gains — including a 40% reduction in database query latency and 25% improvement in frontend load times. Hands-on experience integrating AI features using Grok API (xAI), implementing RAG architectures, and building real-time, full-stack systems. Strong foundation in REST API design, React performance optimization, JWT/OAuth authentication, and MongoDB query optimization.

TECHNICAL SKILLS

Frontend:	React.js, Next.js, TypeScript, Redux Toolkit, Tailwind CSS, Framer Motion, HTML5, CSS3
Backend:	Node.js, Express.js, REST API Design, JWT Authentication, OAuth 2.0, Session Management, Middleware Architecture
Database:	MongoDB (Indexing, Schema Design), Mongoose ODM
AI / LLM:	Grok API (xAI), LLM-powered feature integration
DevOps / Tools:	Git, GitHub, Postman, APIdog, Vercel, Cloudinary CDN, Agile / Scrum
Testing:	Manual API testing (Postman), Edge-case validation, Contract testing

PROFESSIONAL EXPERIENCE

Frontend Developer Intern | Zupper

Mar 2025 – Dec 2025 · Bengaluru

React.js · Redux Toolkit · REST APIs · Git · Agile

- Engineered a **reusable component library of 20+ React components**, standardizing UI patterns across the product and reducing duplicate development effort by an estimated 30%.
- Reduced frontend page load time by **~25%** by implementing memoization (useMemo/useCallback), code splitting with React.lazy, and eliminating unnecessary state re-renders.
- Integrated REST APIs to power **real-time inventory tracking and analytics dashboards**, handling edge cases and loading/error state management.
- Participated in **Agile sprint cycles** (planning, standups, retrospectives), contributing to production deployments with Git branching and PR review workflows.

React Developer Intern | Jozzby Bazar

Sep 2023 – Jan 2024

React.js · JavaScript · REST APIs · Responsive Design

- Built and maintained **responsive, cross-device UI components** ensuring consistent rendering across mobile, tablet, and desktop breakpoints.
- Validated REST API contracts and handled edge cases (null states, error boundaries, async race conditions) during frontend integration.
- Contributed to a **modular, scalable frontend architecture** using reusable component patterns and consistent prop interfaces.

PROJECTS

Cerebrum — AI-Powered Note-Taking Platform

2026

Node.js · React · Grok API (xAI) · RAG · Framer Motion · OAuth 2.0 · MongoDB · Vercel

Live Demo ↗ GitHub ↗

- **AI Integration:** Integrated **Grok API (xAI)** to enable real-time note summarization, writing improvement suggestions, and auto-generated smart tags — reducing manual tagging effort to zero.
- **RAG Architecture:** Implemented retrieval-augmented generation pipeline to surface contextually relevant notes during AI-assisted queries, improving response precision.
- **UX Engineering:** Built a **5-second debounced auto-save system** and fast note creation flow; implemented smart search across titles and content, cutting time-to-note by ~60%.

- **Frontend:** Delivered dark-mode UI with **Framer Motion animations** and shimmering skeleton loading states; fully responsive layout with mobile-optimized sidebar.
- **Auth & Security:** Implemented **OAuth 2.0** authentication with Google secure login/registration flows.

Full-Stack Travel Booking Platform 2025

MERN Stack · Redux Toolkit · MongoDB · Cloudinary · Vercel

- **System Design:** Architected end-to-end system including MongoDB schema modeling, REST API route structure, and scalable booking flow logic from ground up.
- **Performance:** Reduced MongoDB query latency by **~40%** by applying compound indexes on high-frequency search fields (destination, date range, price tier).
- **Asset Delivery:** Integrated **Cloudinary CDN** for image upload and delivery, replacing local storage and improving media load performance.
- **Deployment:** Deployed via Vercel serverless functions with automated email notifications on booking confirmation.

Multi-Vendor E-Commerce Platform 2024

Node.js · React · Redux Toolkit · RBAC · JWT · MongoDB

- Designed a **Role-Based Access Control (RBAC)** system supporting Admin, Vendor, and Customer roles with granular route-level protection middleware.
- Implemented **JWT authentication** with token expiry, refresh logic, and secure API architecture ensuring protected endpoints across all vendor operations.
- Built global state management with **Redux Toolkit** to handle cart state, auth state, and real-time product inventory across multi-vendor storefronts.

PUBLICATIONS

Decentralized Content Creation and Distribution in Web 3.0

Postgraduate Research Paper · 2025

- Analyzed decentralized content platforms, smart contract governance, and DAO incentive models; performed comparative evaluation of Web 3.0 adoption and scalability trade-offs.

EDUCATION

Master of Computer Applications (MCA) | REVA University 2024 – 2025

CGPA: 8.2 / 10
